Highly motivated and committed frontend developer seeking opportunities to apply my knowledge and gain experience as a junior developer. I am passionate about learning new technologies and aim to grow professionally in a collaborative environment where I can contribute to web development projects.

SKILLS

- HTML
- CSS
- JavaScript
- TypeScript
- React
- Git
- Firebase

PROJECTS

- Habital
I am currently working on a habit tracking application called Habital using React and Firebase as the backend. It allows users to create and complete daily habits, features a dashboard, progress charts, streak and best streak counters, and user authentication via Google or email/password.

- Oakea
I recently developed Oakea, an e-commerce website built using TypeScript and React. This app includes features such as the ability to maintain a "favorite products" list and a shopping cart modal. The codebase is well-structured, utilizing modular components that can easily scale for future expansion.

- Portfolio
I developed a portfolio website using React and TypeScript to showcase my projects. I implemented multi-language support and added scroll animations to enhance the user experience.

- Pomoglobo
I created a productivity application with a to-do list, ambient sounds, and a complex timer based on the Pomodoro technique. I used JavaScript and the Freesound API for the sounds and learned how to store and manage data using local storage.

EDUCATION

- Frontend Web Development, CIFO l'Hospitalet, 2023
During the course, I solidified my knowledge of HTML, CSS, and JavaScript and learned best practices in frontend development. Additionally, I familiarized myself with React, functional components, and hooks.

- Full Stack JavaScript, The Odin Project, 2022
I began my web development journey last year through a course called The Odin Project. This program focuses on project-based learning and allowed me to acquire the fundamentals of HTML, CSS, and JavaScript.
